

FIELDMASTER[®]
Multi-Season Series
Agricultural Rubber Tracks

The new FieldMaster™ Multi-Season Series rubber tracks by McLaren Industries are built with new forgings, which are 50% more wear resistant. The new forging material can be welded using hard surfacing welding wire if a repair or rebuilding is required.

Tensile strength has been radically improved to prevent stretching. McLaren's proprietary SpoolRite Belting™ jointless belt system now incorporates more cables, which increases overall tensile strength by 30%.

McLaren utilizes an Extra Wide Forgings - EWF™ System, which allows wider steel belting to further increase the overall track strength. The EWF System also significantly improves stability.

The new FieldMaster™ Multi-Season Series uses an improved rubber compound on both the tread and rolling areas, ensuring many seasons of continuous use. The High-Performance Rolling Area Track (HRAT™) compound is the crucial factor that ensures high track performance at maximum capacity. In addition, the tear and cut resistant 5-RT Compound, which is specially designed for harvesters, features greater UV protection and prevents cracking.

Please, contact your McLaren representative for further product information.

MCL Item #	10x48
Track Width	450 mm
Pitch	90 mm
Link No.	60
Lug Pattern	YT1
Steel Cord Height	21 mm
Inner Guide Width	36 mm
Outer Guide Width	97 mm
Max Machine Weight	5 200 kg
Weight/Link	4.0 kg / 8.93 lbs
Primary Application	Harvester

FIELDMASTER[®]
 Multi-Season Series
 Agricultural Rubber Tracks

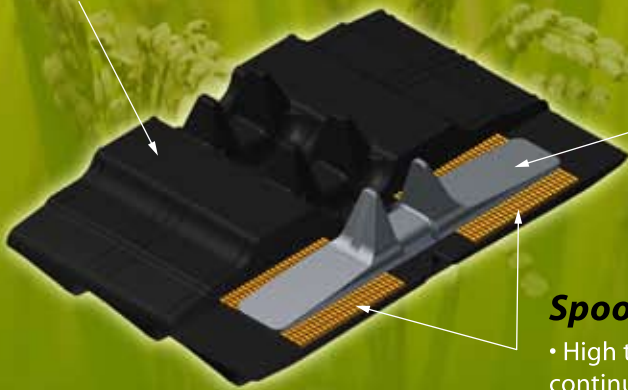

5-RT Compound

- Specially designed compound for harvesters
- Longer lasting tear and cut resistant material
- Greater UV Protection prevents cracking

HRAT[™] Compound

- High-Performance Rolling Area track compound designed to carry the full load of the machine at full capacity

EWF System[™]
 (Extra Wide Forgings)

- Allows wider steel belting for overall increased track strength
- Provides better stability

SpoolRite Belting[™]

- High tensile steel reinforced continuous belts
- Optimum strength
